Re: Dr. Marcel Ovidiu Vlad, Research Proposal

Madrid, January 17, 2006

To Whom It May Concern

I herewith confirm that I am accepting with pleasure the proposal of Dr. Marcel Ovidiu Vlad regarding a collaboration on the analysis of complex reaction and gene networks between us and our institutions, the University Complutense of Madrid, Spain, and the Institute of Mathematical Statistics and Applied Mathematics of the Romanian Academy. Our Department of Biochemistry and Biophysics has the human and material resources necessary for carrying out the experiments suggested by. Dr. Vlad.

Dr. Vlad and myself have a closed scientific relation which started in 1996 and has going on without interruption for ten years. Together we have developed new approaches for the analysis of complicated reaction networks and published 15 papers together. Our research interests are somewhat complementary, resulting in an almost perfect match. Dr. Vlad is a theoretician with great mathematical and physical skills whereas I am an experimental scientist. We are both interested in designing new experiments and our combined expertise has led to new interesting results none of us would have been able to achieve separately. I am looking forward to resume working with Dr. Vlad!.

Sincerely Yours,

A handwritten signature in blue ink, appearing to read 'Federico Morán'.

Prof Dr. Federico Moran,
Professor of Biochemistry,
Head of Biophysics,
